[1] Leonidas Fegaras.  
A new heuristic for optimizing large queries.  

On the optimal nesting order for computing n-relational joins.  

Optimization of nonrecursive queries.  

Optimizing large join queries using a graph-based approach.  

Analysis of two existing and one new dynamic programming algorithm  
for the generation of optimal bushy join trees without cross products.  

Iterative dynamic programming: a new class of query optimization algorithms.
